

Cooking pits, formation processes and democracy

Presentation EAA 2016 Vilnius

Kulturlandskapet

Stig Swedberg & Annika Östlund

This presentation is about:

How we treat different sites/materials equally

The information resources of cooking pits

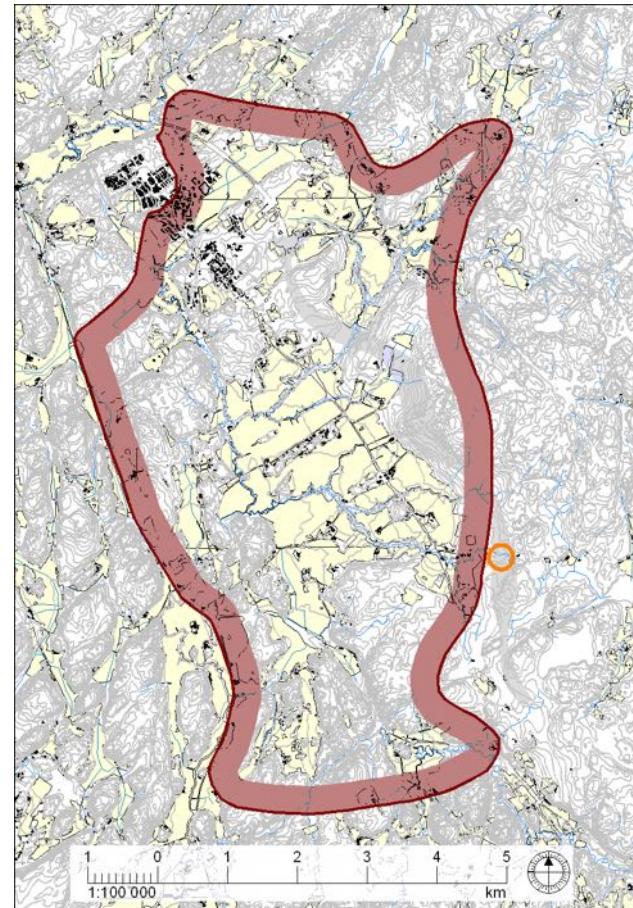

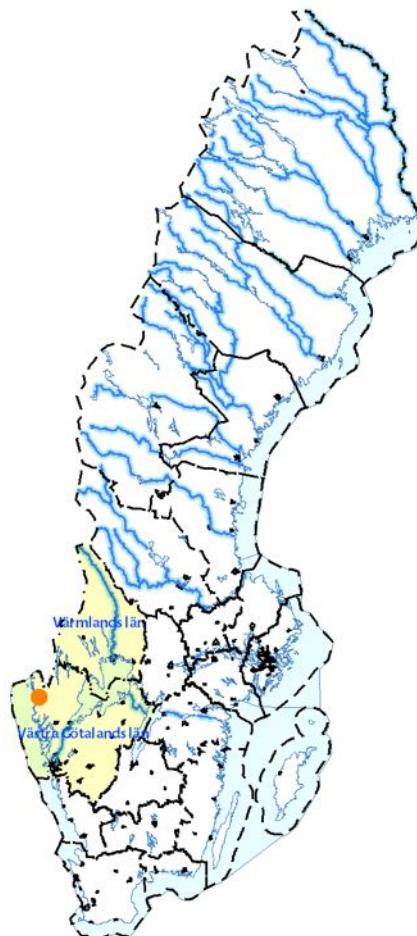

**How this information can be used to support
discussions about democracy in the past and present**

Tanum 1821 - a cooking pit site

Cooking pits - are treated as if:

They contain none or little information

They can be excavated with simple and fast methods

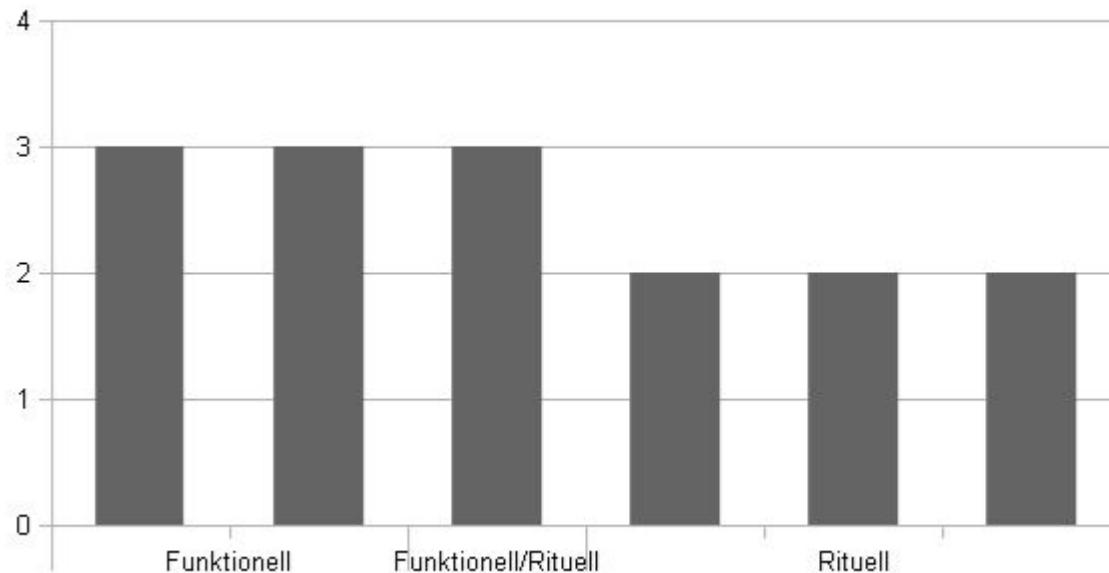

They are often sparsely sampled (*common macrofossil analyses provide sparse results – Petersson 2009. It is well known that cooking pits hardly ever contains macrofossils – Lindman 2014*)

This treatment can lead to misunderstanding, reducing or even excluding several aspects from archaeological interpretations

Tanum 1821 - a cooking pit site

Ritual or functional interpretation based on types of analysis

Kulturlandskapet

Stig Swedberg & Annika Östlund

Tanum 1821 - a cooking pit site

Method – structure and surface sampling

Phosphate analysis

Magnetic susceptibility

Content of organic material

In addition some structures were also sampled for

Lipid acids

Macrofossils

Charcoal for wood-analysis and dating

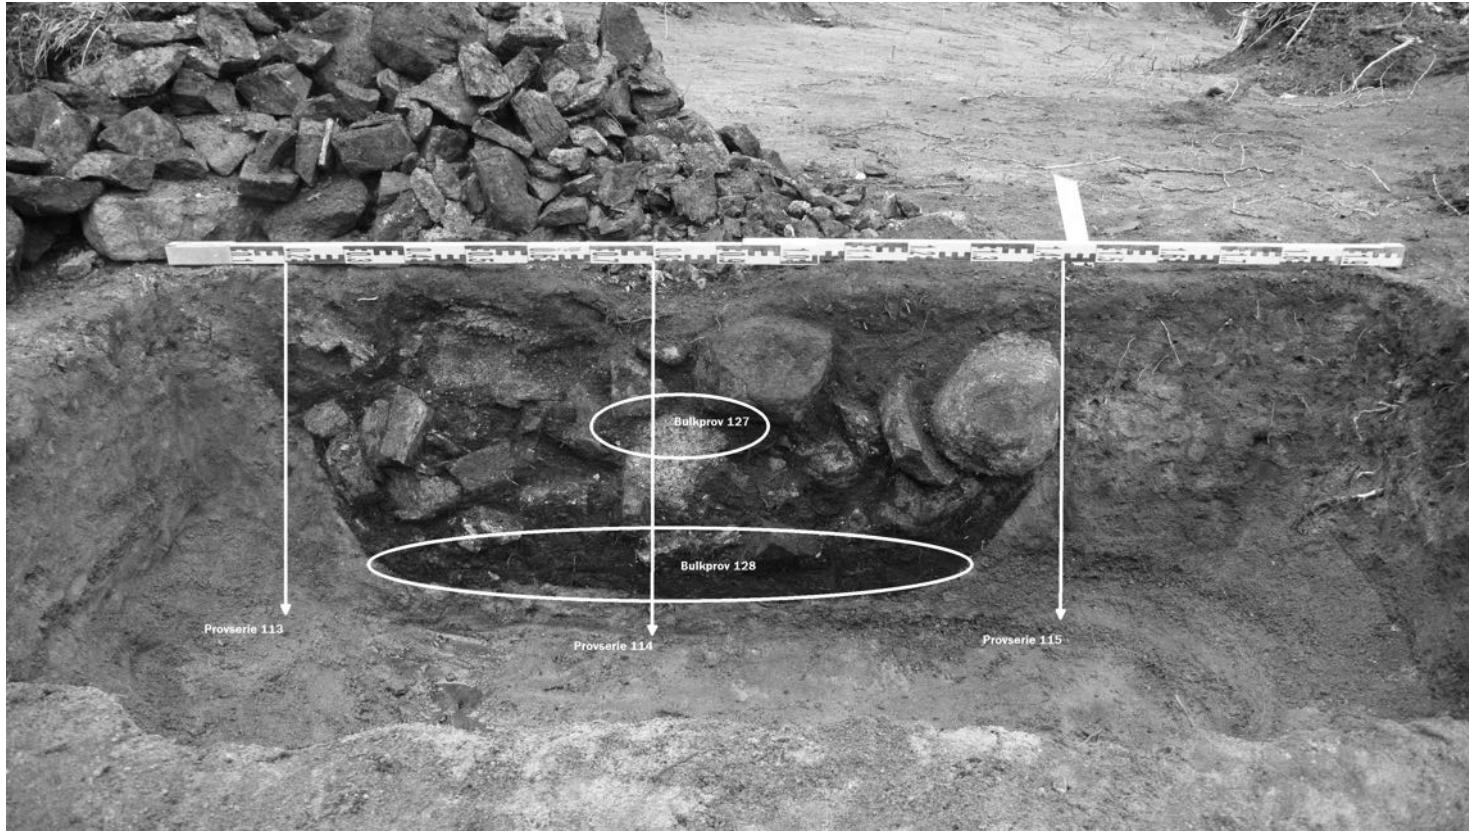

In all fireplaces the volume of large and small fire cracked stones were measured

Tanum 1821 - a cooking pit site

Structures related to grain

Blue – Tanum 1821

Red – other sites in Tanum

Tanum 1821 - a cooking pit site

Interpretation:

The site was used temporarily for grain processing.

The site is peripheral.

A summerfarm?

Conclusions:

By thoroughly sampling structures and sites more complex discussion can be performed.
